## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-24 are still rejected under 35 U.S.C. 102(e) as being anticipated by Nishi et al (US 5883704).

Re clms 1-24: Nishi et al discloses an optical system in a projection exposure system (Fig 2) for microlithography, having a slot-shaped image field or non-rotational-symmetric illumination, a) having an optical element (PL 1) comprising at least one chamber that is sealed from atmospheric pressure and is enclosed by boundary surfaces and that has a fluid filling (Col 4line 38), wherein at least one of the boundary surfaces is exposed at least partially by illumination light (IL); b) fluid source (13a) that has a fluid connection to the chamber via a fluid supply line (19); and c) control device (18) for the pressure of the liquid filling; wherein the at least one enclosed chamber is configured in such a way that a change in the fluid pressure inside the at least one chamber results in a change in non-rotational-symmetric imaging properties (astigmatic) of the optical element that have an n-fold symmetry relative to the optical axis of the optical element, where n is greater than 1.

**FIG. 2**

### ***Response to Arguments***

Applicant's arguments filed 3-6-02 have been fully considered but they are not persuasive. The applicant argues that Nishi et al does not disclose the pressure of a gas could influence imaging properties (Response p7). However, the applicant does not claim a gas but rather a fluid (See claim 1). In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., pressure of a gas) are not recited in the

rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
